- Footnotes:
- 1 Per the Municipal Regional Stormwater Permit, sidewalks and other parts of the right-of-way should be included in the new and/or replaced impervious surface calculation and treated as required
 - 2 "Lined" refers to an impermeable liner placed on the bottom of a Bioretention basin or a concrete Flow-Through Planter, such that no infiltration into native soil occurs.
 - 3 Sizing for Bioretention Area Required calculated using the 4% Method (Impervious Area x 0.04)
 - 4 Gravel is considered as an impervious surface unless it is part of an infiltration trench.
 - 5 The project alters less than 50 percent of the existing impervious surface, therefore only stormwater runoff from the portion of the site that is being redeveloped is required to be treated. DMA 3 is not being redeveloped and is not required to be treated.
